

ZixEncrypt for G Suite

Enhanced Email Encryption and Data Loss Prevention for G Suite

Who Uses Zix?

21,000+ customers including:

- All Federal Financial Institutions Examination Council (FFIEC) regulators
- The U.S. Securities and Exchange Commission (SEC)
- 30% of U.S. banks
- 1,200+ U.S. hospitals
- 30%+ Blue Cross Blue Shield (BCBS) organizations

Benefits

- Seamless integration with G Suite
- Automated email encryption and data loss prevention, no user training required
- Improved compliance with federal, state and industry regulations
- Send securely to anyone, anywhere and on any device
- Transparent encryption from sender to recipient
- Visibility into encrypted and quarantined email for improved compliance
- Simplified implementation support of TLS for email

Features

- Policy-based email encryption and data loss prevention
- Content scanning with robust compliance filters
- Multiple secure delivery options using patented Best Method of Delivery (BMOD)
- Automatic, bi-directional email encryption between Zix customers
- Innovative dashboard with instant access to more than 30 reports
- Policy-based TLS with secure fail-over

ZixEncrypt for G Suite offers policy-based email encryption and email data loss prevention to make securing your sensitive email communication easy. ZixEncrypt for G Suite scans the content of all your outbound email and automatically encrypts based on policies you define. It automatically ensures compliance of your G Suite email communication without requiring special training or procedures for your employees. ZixEncrypt is available as physical or virtual appliance and as a hosted solution.

Policy-based Email Protection

ZixEncrypt for G Suite provides robust filtering technology that enables you to define and manage policy rules for protecting sensitive email content and ensuring compliance. Pre-defined filters are available for healthcare, financial, state privacy, education and more. Based on the email content you can determine if the email should be blocked, routed, quarantined or encrypted.

Bi-Directional Transparent Delivery

Just as ZixEncrypt for G Suite automatically scans your email, it also automatically determines the most efficient way to securely deliver your messages using our patented Best Method of DeliverySM. Through the Best Method of Delivery, encrypted email is delivered to anyone, anywhere and often transparently Zix offers the industry's only bidirectional transparent email encryption, enabling senders and recipients to exchange encrypted email without any extra steps. When you send an encrypted email to another Zix customer, the message and replies are encrypted transparently, so that not even a password is needed. On average, more than one-third of our customers' recipients receive their encrypted email messages transparently.

Superior Support for TLS

If you have ever tried to use TLS to secure email communication with partners, you are probably familiar with the manual effort required to securely configure and manage each TLS connection. ZixEncrypt for G Suite simplifies the set up and management of TLS by making it a part of your email encryption policies. By including TLS in a policy, you increase control and reporting visibility on your TLS encrypted email. ZixEncrypt lets you define the level of certificate authentication and encryption used with TLS, so you can improve security of your TLS connections. When using TLS, secure email is delivered transparently, further enhancing ease of use. Additionally, if TLS is not available, you can configure ZixEncrypt to fallback to an alternative delivery method to ensure the email is still delivered securely.

Convenient Data Loss Prevention

If a policy is triggered and email is quarantined, a notification email is sent to the employee, employee's manager and/or an administrator. Embedded in the notification is a link to review the quarantined email with highlighted violations. Depending on your preferences, employees and managers can release the email with justification noted or delete the email and draft a new version. If released, the email can be encrypted based on a user trigger or your policies.

Flexible Delivery

When sending to recipients who do not have email encryption capabilities, ZixEncrypt for G Suite offers you two different delivery methods – pull and push. The pull method offers a secure portal that makes receiving an encrypted email easy, even on a mobile device. You can also brand and integrate the secure portal into your corporate portal. The push method allows the email to be delivered directly to a user's inbox as an HTML attachment. All of these options combine to create the Zix Best Method of Delivery, which automatically determines the most secure and transparent method of sending your message.

About Zix

Zix is a leader in email security. Trusted by the nation's most influential institutions in healthcare, finance and government, Zix delivers a superior experience and easy-to-use solutions for email encryption and data loss prevention, advanced threat protection, archiving and bring your own device (BYOD) security. Focusing on the protection of business communication, Zix enables its customers to better secure data and meet compliance needs. Zix is publicly traded on the Nasdaq Global Market under the symbol ZIXI.
