Features:

- Policy-based email encryption and data loss prevention
- Content scanning with robust compliance filters
- Multiple secure delivery options using patented Best Method of Delivery (BMOD)
- Automatic, bi-directional email encryption between Zix customers
- Innovative dashboard with instant access to more than 30 reports
- Policy-based TLS with secure fail-over

ZixEncrypt for Office 365 offers policy-based email encryption and email data loss prevention to make securing your sensitive email communication easy. ZixEncrypt for Office 365 scans the content of all your outbound email and automatically encrypts based on policies you define. It automatically ensures compliance of your Office 365 email communication without requiring special training or procedures for your employees.

Policy-based Email Encryption

ZixEncrypt for Office 365 provides robust filtering technology that enables you to define and manage policy rules for protecting sensitive email content and ensuring compliance. Pre-defined filters are available for healthcare, financial, state privacy, education and more. Based on the email content, you can determine if the email should be blocked, routed, quarantined or encrypted.

Bi-Directional Transparent Delivery

Just as ZixEncrypt for Office 365 automatically scans your email, it also automatically determines the most efficient way to securely deliver your messages using our patented Best Method of Delivery[®]. Through the Best Method of Delivery, encrypted email is delivered to anyone, anywhere and often transparently.

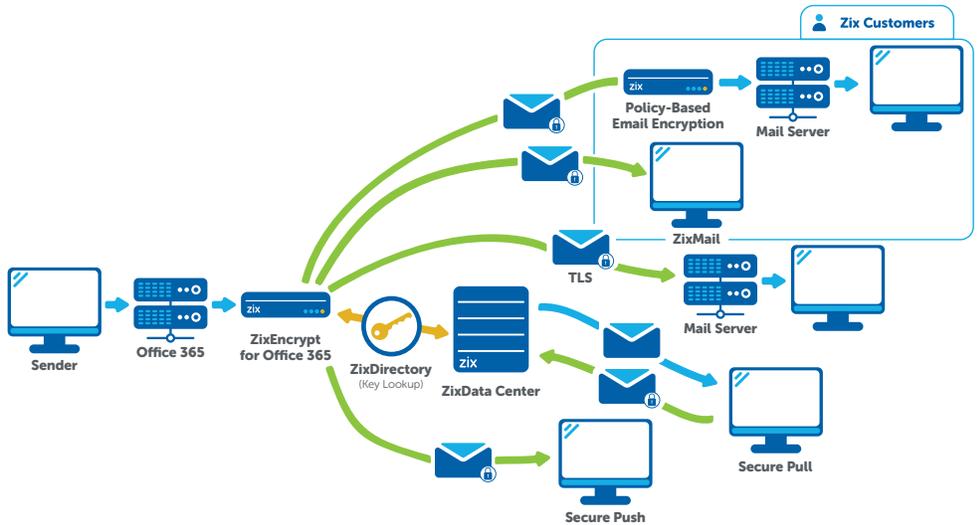

Zix offers the industry's only bidirectional transparent email encryption, enabling senders and recipients to exchange encrypted email without any extra steps. When you send an encrypted email to another Zix customer, the message and replies are encrypted transparently, so that not even a password is needed. On average, more than one-third of our customers' recipients receive their encrypted email messages transparently.

About Zix

To better meet your company's data protection and compliance needs, Zix can enhance your Office 365 environment with advanced threat protection, email encryption, data loss prevention, archiving and bring your own device (BYOD) mobile security. Zix delivers a superior experience and easy-to-use solutions that have earned the trust of more than 19,000 organizations including the nation's most influential institutions in healthcare, finance and government.

Leveraging our more than 15 years of hosted experience, you can have confidence that Zix email security integrates seamlessly with Office 365. You also benefit from the support of the ZixData Center, a state-of-the-art facility with PCI DSS 3.2 certification, SOC2 accreditation and SOC3 certification. Staffed 24/7/365, ZixData Center has a track record of consistent 99.999% availability. In addition, Zix delivers exceptional customer support - available by phone 24/7/365 to address any question or need.

With reliability, experience and superior support, Zix enhances the security and compliance of your Office 365 environment. To learn more, visit www.zixcorp.com/office365.

Superior Support for TLS

ZixEncrypt for Office 365 simplifies the set up and management of TLS by making it a part of your email encryption policies. By including TLS in a policy, you increase control and reporting visibility on your TLS encrypted email.

ZixEncrypt for Office 365 lets you define the level of certificate authentication and encryption used with TLS, so you can improve security of your TLS connections and further enhance ease of use. Additionally, if TLS is not available, you can configure ZixEncrypt for Office 365 to fall-back to an alternative delivery method to ensure the email is still delivered securely.

Flexible Delivery

When sending to recipients who do not have email encryption capabilities, ZixEncrypt for Office 365 offers you two different delivery methods – pull and push. The pull method offers a secure portal that makes receiving an encrypted email easy, even on a mobile device. You can also brand and integrate the secure portal into your corporate portal. The push method allows the email to be delivered directly to a user's inbox as an HTML attachment. All of these options combine to create the Zix Best Method of Delivery, which automatically determines the most secure and transparent method of sending your message.

Convenient Data Loss Prevention

If a policy is triggered and email is quarantined, a notification email is sent to the employee, employee's manager and/or an administrator. Embedded in the notification is a link to review the quarantined email with highlighted violations. Depending on your preferences, employees and managers can release the email with justification noted or delete the email and draft a new version. If released, the email can be encrypted based on a user trigger or your policies.

Exceptional Support

In addition to a superior solution for email encryption and data loss prevention, the Zix support team is available 24/7/365. A technical expert is ready to speak with you by phone regarding any question or need.
