

# ZixProtect for G Suite

Enhance G Suite with Added Email Threat Protection, Encryption and Data Loss Prevention

## Who Uses Zix?

### 21,000+ customers including:

- All Federal Financial Institutions Examination Council (FFIEC) regulators
- The U.S. Securities and Exchange Commission (SEC)
- 30% of U.S. banks
- 1,200+ U.S. hospitals
- 30%+ Blue Cross Blue Shield (BCBS) organizations
- Numerous nationwide and regional Managed Service Providers (MSPs)

## Benefits

- Seamless integration with G Suite
- Protection from phishing, zero-hour malware, ransomware, business email compromise, spam and more
- Automated email encryption and data loss prevention, no user training required
- Prevents sensitive data from being sent to unauthorized recipients
- Convenient user experience for increased adoption of email security
- Improved compliance with regulatory and corporate policies

## Features

- Multi-layer threat filtering combined with machine-learning and real-time threat analysts
- Attachment disarming with forensic sandbox analysis
- URL re-writing with time-of-click analysis
- Policy-based email encryption and data loss prevention with robust compliance filters
- Mobile-friendly secure portal for delivering encrypted emails to anyone, anywhere

**ZixProtect for G Suite is a cloud-based security solution that protects inbound and outbound email by combining advanced threat protection, encryption and data loss prevention to deliver increased security with an easy-to-use experience.**

## Email Threat Protection

ZixProtect for G Suite delivers 99.5% accuracy in detecting phishing, zero-hour malware, ransomware, business email compromise, spam, and more. The multi-layer filtering engine delivers an extraordinary level of accuracy that reduces both false negatives (bad emails getting in) and false positives (good emails kept out). This reduces the time your team spends managing the system and improves business communications flow.

## Email Data Loss Prevention

ZixProtect for G Suite provides robust filtering technology that enables you to define and manage policy rules for protecting sensitive email content and ensuring compliance. Pre-defined filters are available for healthcare, financial services, state privacy, education and more. Based on email content, policies can be defined to determine if the email should be blocked, routed, quarantined or encrypted.

## Multi-Layer Filtering

ZixProtect’s multi-layer filtering engine provides highly accurate threat protection by analyzing email content and the source of the email. ZixProtect for G Suite combines standard IP address and URL filters with targeted phrase, pattern, and malware filters. Phrase filters look for multi-word phrases in conjunction with 250+ attributes of an email to precisely identify unwanted solicitation, phishing and malware infected messages.

The customized pattern filters allow specific attack campaigns to be identified and blocked. Finally, the malware filters identify both known and zero-hour malware attacks, and the re-filtering technology allows additional analysis of questionable emails. These robust filters are combined with automated traffic analysis, sophisticated machine learning, and threat analysts to create a system that accurately identifies and protects against even zero-hour attacks.

## Targeted Threat Protection

ZixProtect Premium for G Suite increases protection with three key functionalities:

- Attachment Assurance performs forensic analysis of attachments in Zix’s secure, cloud-based sandbox environment. The feature also provides options for delivering a “disarmed” version of files by removing macros or converting files to PDF format.
- Link Defense re-writes all links to safe versions and performs time-of-click analysis on the destination address. Based on testing, users are either automatically re-directed to a safe site, provided a warning for suspicious sites, or blocked from sites identified as malicious.

## Business Email Continuity

ZixProtect for G Suite includes email continuity to ensure access to business emails during an email service disruption. ZixProtect spools incoming emails for up to 5 days and automatically delivers them when email service is restored. Users can also access 30-days’ worth of email through a web-based interface where they can read, reply, forward, and compose new messages.

## Email Encryption

ZixProtect for G Suite email encryption that automatically determines the most efficient way to securely deliver sensitive emails using our patented Best Method of Delivery<sup>SM</sup>. Through BMOD, encrypted email is delivered to anyone, anywhere and often transparently. Zix offers the industry’s only bi-directional transparent email encryption, enabling senders and recipients to exchange encrypted email without any extra steps. When you send an encrypted email to another Zix customer, the message and replies are encrypted transparently, so that not even a password is needed. ZixProtect also offers a secure way to send using Transport Layer Security (TLS) without being susceptible to a man-in-the-middle attack. When sending to recipients who do not have email encryption capabilities, Zix offers a secure portal that makes receiving an encrypted email easy, even on a mobile device. The secure portal can be branded and configured to meet your business needs and can be integrated into your corporate website.

## ZixProtect Bundles

ZixProtect for G Suite is available in three different bundles:

|                                                              | PROTECT ESSENTIALS | PROTECT PLUS | PROTECT PREMIUM |
|--------------------------------------------------------------|--------------------|--------------|-----------------|
| <b>Email Threat Protection</b><br>• URL Re-Write/Analysis    | ✓                  | ✓            | ✓               |
| <b>Advanced Threat Protection</b><br>• Attachment Sandboxing |                    | ✓            | ✓               |
| <b>Email Encryption</b>                                      |                    |              | ✓               |
