

GAME

for G Suite Users

Benefits:

- Send secure email to anyone
- Email compliance with U.S. federal and state regulations
- Quick deployment
- No training for end-users
- Transparent delivery for senders and receivers
- Guaranteed secure replies
- Seamless integration with existing infrastructure and systems

Features:

- Content aware policy management
- Automatic retrieval and distribution of encryption keys
- Content scanning of subject line, message and attachments
- Easy management control for GAME administrators
- FIPS 140-2 cryptographic engine

Standards-Based Encryption:

- RSA 3072-bit public key encryption
- AES 256-bit symmetric key encryption
- SHA 256-bit hashing
- X. 509 digital certificates
- S/MIME support

GAME is an email encryption solution for G Suite users designed through an exclusive partnership between Google and Zix. In selecting GAME to protect sensitive information in email, you're using a solution that is trusted by:

- All Federal Financial Institutions Examination Council (FFIEC) regulators
- Seven divisions of the U.S. Treasury
- The U.S. Securities and Exchange Commission
- 30 percent of U.S. banks
- More than 30 Blue Cross Blue Shield organizations
- More than 1,200 U.S. hospitals

Easy to Use from the Start

Sitting on the edge of your G Suite environment, GAME automatically inspects and encrypts outbound email with sensitive information in the message or attachments. With automatic encryption, GAME makes secure email as easy as regular email for your employees - no extra steps or passwords needed to send or receive encrypted email. GAME provides your organization with peace of mind that sensitive information is protected while assisting your organization with regulatory and corporate compliance for email without requiring special training or procedures for employees.

Automated Key Management

GAME also automates the most complicated and costly aspect of email encryption - key management. With GAME, all key management is handled through the industry's largest hosted global directory. The global directory includes tens of millions of members and increases by approximately 170,000 members per week. The global directory also safeguards against expired keys and certificates by providing centralized distribution among all members.

About Zix

Zix is a trusted leader in email data protection. Zix offers industry-leading email encryption, a unique email data loss prevention (DLP) solution, and an innovative bring your own device (BYOD) email solution to meet your company's data protection and compliance needs. Zix is trusted by the nation's most influential institutions in healthcare, finance and government for easy-to-use secure email solutions. For more information, visit www.zixcorp.com

The Most Advanced, Fully Transparent Delivery

Just as GAME automatically scans email, it also automatically determines the most efficient way to securely deliver messages using the *Best Method of Delivery*SM. Through the Best Method of Delivery and the global directory, encrypted email is delivered to anyone, anywhere and often transparently.

Bidirectional transparent email encryption is a unique benefit provided only to GAME and Zix customers. When a GAME customer sends encrypted email to another customer on the same platform, the message is sent transparently. The email and replies are delivered securely without any additional effort from the sender, recipient or administrator. On average, 70 percent of encrypted messages are received transparently, so that not even a password is needed.

**The Power of
One Community**

**The Complexity and
Frustration of Separate
Communities**

Flexible Delivery

If recipients do not use the same email encryption platform, encrypted messages can be delivered seamlessly through Transport Layer Security (TLS), in less than two steps through a secure Web portal or using a push technology. The secure Web portal can be branded and integrated into your corporate portal, and its mobile-friendly design enables seamless access from a desktop to any mobile device. The push method delivers encrypted email directly to user inboxes through a secure attachment. All of these options combine to create the Best Method of Delivery, which automatically determines the most secure and easy method of sending your message.

State-of-the-Art Facility

GAME is supported by a PCI DSS 3.2 certified, SOC2 accredited and SOC3 certified facility. Monitored 24 hours a day, the facility offers redundant power sources, storage units and security measures, and it has a track record of consistent 99.999% availability.
